LABOR MARKET REVIEW

Economic Growth Region 10

Statistical Data Report for July 2014, Released August 2014

Regional and State Unemployment (seasonally adjusted)

Regional and state unemployment rates were generally little changed in July. Thirty states had unemployment rate increases from June, 8 states had decreases, and 12 states and the District of Columbia had no change, the U.S. Bureau of Labor Statistics reported. Forty-nine states and the District of Columbia had unemployment rate decreases from a year earlier and one state had an increase. The national jobless rate was little changed from June at 6.2 percent but was 1.1 percentage points lower than in July 2013.

Mississippi had the highest unemployment rate among the states in July, 8.0 percent. North Dakota again had the lowest jobless rate, 2.8 percent. In total, 18 states had unemployment rates significantly lower than the U.S. figure of 6.2 percent, 8 states and the District of Columbia had measurably higher rates, and 24 states had rates that were not appreciably different from that of the nation.

Restaurants help feed job growth: how the leisure and hospitality industry fared after the recent employment downturn

(Excerpt from the Bureau of Labor Statistics, Beyond the Numbers, July, 2014 By John Coughlan)

The most recent employment downturn was historic in many ways, but most notably, in the substantial number of jobs lost. Data from the Bureau of Labor Statistics Current Employment Statistics (CES) survey show that total nonfarm employment fell by 8.7 million jobs between the employment peak in January 2008 and the employment trough in February 2010. In percentage terms, this was the largest job loss since the 1940s. Total nonfarm payroll employment did not make a full recovery until May 2014, a full 51 months after its employment low. During this recovery period, the leisure and hospitality industry gained more than 1.6 million jobs, accounting for almost 1 out of every 5 nonfarm jobs added during the recovery. Although other industries had similar or larger job gains, the leisure and hospitality industry is interesting because so many of the jobs were created in very few component industries.

Before the most recent recession, there was an employment downturn between July 2001 and June 2002. The leisure and hospitality industry employment recoveries in 2002 and 2010 differ in several ways. For many industries, the 2001 employment downturn was shorter than the 2007 downturn and the accompanying job losses were less severe. The leisure and hospitality industry was no exception. It took leisure and hospitality 6 months to recover the 205,000 jobs it lost between its July 2001 peak and its June 2002 trough—a recovery rate of about 17 percent per month. Overall, it took half as long to recover the jobs as it did to lose them. In contrast, it took the leisure and hospitality industry 24 months to recover the 619,000 jobs it lost from the December 2007 peak to the January 2010 trough—a recovery rate of about 4 percent per month.

Although retail sales data at food services and drinking places collected by the U.S. Census Bureau are volatile, they track closely with changes in employment. On an inflation-adjusted basis, retail sales at food services and drinking places declined briefly in 2001 but recovered very quickly. For the most recent recession, the sales data also show a period of decline from December 2007 through January 2010, followed by a strong period of recovery—again coinciding with trends in employment.

Food services and drinking places contains three major components: special food services, drinking places (alcoholic beverages), and restaurants and other eating places. Virtually all of the job gains in food services and drinking places occurred in restaurants and other eating places, the largest component of the industry. The employment gains in restaurants and other eating places were so strong they accounted for 74 percent of all the jobs gained in leisure and hospitality and 14 percent of all the jobs gained in total nonfarm employment as of May 2014. Job losses in restaurants and other eating places accounted for 53 percent of all the job losses within leisure and hospitality and 4 percent of the jobs lost in total nonfarm during the most recent downturn.

Total nonfarm employment has fully recovered from the most recent employment downturn. Despite making up only 8 percent of total nonfarm employment, the food services and drinking places industry has accounted for almost 1 out of every 6 nonfarm jobs added during the recovery. With restaurants leading the job gains within food services and drinking places, this industry is feeding more than its share of job growth during a recovery hungry for jobs.
